Welcome (II)

Jørgen Christensen-Dalsgaard
Danish AsteroSeismic Centre (DASC)
Department of Physics and Astronomy (IFA),
University of Aarhus

The objectives of the first Kepler Asteroseismology Meeting are twofold. First of all, the aim of the meeting is to formally start the work of the Kepler Asteroseismology Science Consortium (KASC) and to allow members of KASC to meet and discuss the background and contents of the Kepler Asteroseismic Investigation (KAI). Second, the meeting shall allow the KASC Steering Committee to plan the work within KAI, especially concerning know-how, background and the amount of work that each KASC subgroup expects to contribute to the overall project.

The programme will contain overview presentations of the Kepler Mission, focusing on the asteroseismology part of the project. We also have a session on the latest news from CoRoT and MOST in order to be able to discuss the relation between the existing space missions and Kepler. A number of contributing talks by members of KASC will take place on Tuesday, and after this we have a number of splinter meetings on specific activities to be held.

Objectives

Objectives of the first Kepler Asteroseismology Meeting:

- The aim of the meeting is to formally start the work of the Kepler Asteroseismology Science Consortium (KASC) and to allow members of KASC to meet and discuss the background and contents of the Kepler Asteroseismic Investigation (KAI).
- The meeting shall allow the KASC Steering Committee to plan the work within KAI, especially concerning know-how, background and the amount of work that each KASC subgroup expects to contribute to the overall project.

Programme

- Overview presentations of the Kepler Mission, focusing on the asteroseismology part of the project.
- A session on the latest news from CoRoT and MOST in order to be able to discuss the relation between the existing space missions and Kepler.
- A number of contributing talks by members of KASC
- A number of splinter meetings on specific activities to be held.
